SCENARIO

Logging, updating and validating an incident on the ServiceNow Incident form

Entice

How does someone initially become aware of this process?

Enter

What do people experience as they begin the process?

Engage

In the core moments in the process, what happens?

Exit

What do people typically experience as the process finishes?

Extend

What happens after the experience is over?

Steps

What does the person (or group) typically experience?

Entice	Enter	Engage	Exit	Extend
Incident reported A caller reports an issue by phone, email or the portal.	**Fill mandatory fields** The agent enters Short description and other required details.	**Submit the incident** The agent clicks Submit and the onSubmit script validates the data.	**Incident saved** The record is created with complete and correct data.	**Data flows to queues** Assignment rules and SLAs use the saved values.
Open the Incident form The agent clicks Create New in the Incident module.	**Fields react** Fields show, hide or become read-only based on the values chosen.	**See the validation result** Invalid data stops the save and a message appears.	**Edit from the list** The agent edits a value directly in the list view.	**Reports stay accurate** Dashboards and reports show clean incident data.
Review the form The agent looks at the fields shown on the new Incident form.	**Change a value** The agent changes Urgency or Category on the form.	**Correct and resubmit** The agent fixes the highlighted field and saves again.	**Move to the next incident** The agent moves on to the next incident in the queue.	**Admin tests the setup** The administrator tests every rule with sample incidents.
Pick caller and category The agent fills in Caller and Category.	**Urgency action** A UI Policy Action reacts to the Urgency value.			**Improve the rules** The team refines the UI Policies and Client Scripts.
Set impact and urgency The agent picks the Impact and Urgency values.	**Review the details** The agent checks the entered details before saving.			

Interactions

What interactions do they have at each step along the way?

Entice	Enter	Engage	Exit	Extend
Phone, email or self-service portal	Short description and Description fields	Submit button	Incident record and activity stream	Assignment rules, SLAs and notifications
ServiceNow Incident module: Create New	UI Policy conditions run on form load and on change	Error message on the form	Incident list view (inline edit)	Dashboards and reports
Incident form in the browser	g_form API and onChange Client Script	Highlighted field on the form	Incident list / queue	Impersonation, test incidents, browser console
Caller and Category reference / choice fields	UI Policy Action: Urgency	onSubmit Client Script	onCellEdit Client Script	UI Policy and Client Script records, update set
Impact and Urgency choice lists	Incident form, all sections			
Caller / requester	UI Policy marks fields mandatory			
Many fields visible at once				

Goals & motivations

At each step, what is a person's primary goal or motivation? ("Help me..." or "Help me avoid...")

Entice	Enter	Engage	Exit	Extend
Help me understand the caller's problem quickly	Help me not forget the required details	Help me save only correct data	Help me trust that the record is complete	Help me trust that routing is right
Help me start logging the incident fast	Help me see fields that fit this incident	Help me understand what is wrong	Help me update values fast without opening the form	Help me report on reliable data
Help me see only the fields I need	Help me get instant feedback when I change a value	Help me fix the problem quickly	Help me move on without worrying about clean-up	Help me confirm every rule works
Help me avoid choosing the wrong category	Help me capture extra details for urgent incidents			Help me improve the rules over time
Help me set the right priority without guessing	Help me feel sure the details are right			

Positive moments

What steps does a typical person find enjoyable, productive, fun, motivating, delightful, or exciting?

Entice	Enter	Engage	Exit	Extend
Familiar and simple starting point	Mandatory marker shows what is missing	One click saves the incident	Incident created with correct data	Correct data routes incidents properly
Caller details fill in automatically	The form feels smart and guided	A clear message points to the exact field	Fast list edits save time	Reports are clean and consistent
	Instant message right after a change	Quick fix and save	Less rework after saving	Easy to adjust a rule later
	Confident that the form is complete			

Negative moments

What steps does a typical person find frustrating, confusing, angering, costly, or time-consuming?

Entice	Enter	Engage	Exit	Extend
Details from callers often arrive incomplete	Required fields are found only after saving	Invalid data gets saved without a warning	List edits can bypass the form rules	Bad data breaks dashboards
Irrelevant fields clutter the form	Fields stay visible even when not relevant	Vague error messages cause confusion	Time spent fixing records later	Scripts are hard to test in every scenario
A wrong category sends the incident to the wrong team	No feedback until the form is saved	Repeated errors feel frustrating		
Unsure which Urgency value to select	High-urgency incidents miss key details			
	No quick way to review the data entered			

Areas of opportunity

How might we make each step better? What ideas do we have? What have others suggested?

Entice	Enter	Engage	Exit	Extend
How might we hide fields until they are needed? (UI Policy)	Make required fields mandatory with a UI Policy	onSubmit validation before the save	onCellEdit validation for list edits	Test valid and invalid inputs on the form and list
Could the form react when Category changes? (onChange)	Show / hide fields by condition	Show clear, specific error messages		How might we document the rules for the team?
How might we guide the Urgency choice with a message?	onChange script on Urgency and Impact	How might we stop the same mistake from repeating?		
	Make related fields mandatory when Urgency is High
